<b>Sending a CDA as an XML File</b>	<b>4</b>
<b>Related Specifications</b>	<b>5</b>
<b>Example CDA</b>	<b>5</b>

# Introduction

This specification is designed to assist in the development of an interface between our partners and Health Gorilla for transmitting CDA documents.

This document explains the technical details of our HL7 standard support. Interface development between HG and our vendors is approved by our business development team, then scheduled and managed by our engineering and development organization. We work in conjunction with our vendor partners to spend time analyzing and planning our interface to ensure that both parties are using the same optional features.

# Methods of Receiving a CDA

The following methods are used by Health Gorilla to receive CDA's.

Method
IHE XCA transactions ITI-38, ITI-39
IHE XDS transaction ITI-41
FHIR
SFTP

## Sending a CDA Document in a HL7 V2.x Message

In a HL7 V2.x message, a CDA is exchanged in the OBX segment. Within the OBX segment, the CDA is sent as a MIME package and encoded as a V2.x encapsulated data type. The following fields and values should be used.

Component	Value
OBX 2	ED
OBX 5.2	multipart
OBX 5.3	x-hl7-cda-level-one
OBX 5.4	A
OBX 5.5	MIME package

## Sending a CDA as an XML File

Health Gorilla can accept a CDA as an XML file. Health Gorilla can accept CDA's created to the specifications below. An example message can be found at the end of this document.

# Related Specifications

Health Gorilla accepts CDA's created to the following specifications.

Specification	URL
HL7 CDA.R2	<a href="https://www.hl7.org/implement/standards/product_brief.cfm?product_id=7">https://www.hl7.org/implement/standards/product_brief.cfm?product_id=7</a>

## Example CDA Document
