Safe and convenient care

Large-slatted siderails provide a warm and friendly appearance and can be completely lowered for 360-degree unobstructed access to the patient.

Quiet swing-open access doors allow convenient patient care without disturbing a sleeping child. The access doors have built in safety features to help ensure a child cannot open it from the inside.

All activation points are colored red and require two adult size hand movements to initiate. This helps to ensure movements are deliberate and the patient remains in the crib.
