Background

On September 6, 2017, Hurricane Irma had significant impact on Puerto Rico and an Emergency Declaration was issued for the island. Two weeks later, on September 20, Hurricane María lashed Puerto Rico (PR). María made landfall in the municipality Yabucoa as a strong category 4 hurricane with maximum sustained winds of 155 mph. The center of the storm moved west-northwestward into the interior and northwestern PR producing catastrophic and flash flooding. The storm severely damaged or destroyed the already fragile critical infrastructure. María left Puerto Rico's residents with no electricity, no water, no telecommunications and no transportation systems. President Trump approved a major disaster declaration for Puerto Rico under the Stafford Act, which allowed the activation for federal assistance for the island.

This report presents findings of a community health needs assessment, in the municipality of Humacao, Puerto Rico, carried out by the Office of Public Health Preparedness and Response (OPHPR) of the Puerto Rico Department of Health.

Humacao is located in the eastern coast of Puerto Rico an area that historically receives a large impact from hurricanes, right north of Yabucoa, where hurricane Maria hit land. Humacao's district experienced the longest duration of power failure in the island, with an average days without of electricity of 123 days compared to 106 days average for Puerto Rico (Román, M.O., Stokes, E.C., Shrestha, R. et al., 2019).

The goals of the assessment were to (1) identify health, environmental, household characteristics, and individual behaviors that can increase the community's risk in an emergency, and (2) assess the storm's impact on households and long-term recovery of the community. This information will be used to inform the PRDoH response process. The assessment also builds on the agency's capacity to implement the CASPER methodology rapidly after emergencies.

Methods

Sampling

This study followed the Community Assessment for Public Health Emergency Response (CASPER) Methodology. The sampling methodology involves two stages that provide data representative of the sampling frame.

In the first sampling stage 30 clusters, corresponding to 30 U.S. Census blocks, are selected with a probability proportional to the estimated number of households within the clusters. The area selected was the closest to coast because of the interest in analyzing the impact in coastal communities.

The study area was selected using ArcGIS. The number of households was obtained from the U.S. Census website (http://factfinder2.census.gov) and total households was used to calculate the weight of each cluster. This variable was selected because the information from the U.S. Census it's 9 years old and occupation status has probably changed in these period. The sampling frame was comprised of a total of 92 census blocks and 2,528 housing units.

A list of all clusters (i.e., census blocks) in the sampling frame with the corresponding number of households was created. Then, each cluster was assigned with a cumulative sum of the number of households. Finally, 30 clusters were selected by using a random number generator to randomly choose 30 numbers between 1 and 2,528 (the total number of households in the sampling frame). Then the entire cluster in which that random number (i.e., household) was located was selected. This process was conducted using GIS toolbox developed by CDC GIS experts that can automatically select clusters.

For the second stage, the number of households in the cluster was divided by 7, 14 or 21, depending on the number of times the cluster was selected in the first sampling stage. The result is the "nth" number. When arriving at the clusters, the interviewers chose a starting point arbitrarily and approached every nth household for interview. This two-stage sampling methodology should produce a sample of 210 households/interviews (30 clusters x 7 interviews in each cluster).

Questionnaire

The CASPER methodology uses household-level questions. Some of the questions used were selected, adapted and translated from the bank of questions included in the CASPER Toolkit, other questions were developed by researchers from the PRDoH. The resulting 25-minute survey was 79 questions long. The questions were mostly closed-ended, though some were open-ended. Open-ended questions were included as follow-up prompts which would, for example, ask how many people in the household met a certain characteristic, or an explanation for the selection of

the answer "other". The final question regarding the current concern regarding the recovery of their community, was also an open-ended question.

Questions covered environmental health and exposures, health conditions and treatments, community's critical infrastructure, impacts of hurricane María on the household and the community, behavior and knowledge about emergency preparedness, and emotional wellbeing. An additional form was used to collect participation information for each household that was approached, in order to provide data for the contact rates.

Training and Interviews

Interviewers included personnel from the OPHPR and volunteers from two local nursing schools. As per local IRB regulations, all interviewers completed certificates in Human Research Subjects and HIPAA. Prior to the field work, they were also trained in the CASPER sampling methodology, interview techniques, the meaning of each question, as well as how to fill out the questionnaire and other related forms. Orientations regarding field safety, assessment-day logistics and communications were also an essential part of the training process.

The assessment was carried out on Friday, April 26 and Saturday, April 27, 2019, from 9:30am to 4:30pm. In order to participate in the survey, the respondent must: live in the sampled household, be 21 years of age or older, and speak and understand Spanish. CASPER does not collect any personal identifiers from respondents. For this reason, the interviewer must assess compliance to the inclusion criteria, as well as gather oral consent. Respondents were given an Informative Letter which they had the option of reading along with the interviewer, as well as the opportunity to clarify or answer any related questions. Once the interviewer made sure that the letter was understood, and oral consent was given, the interview proceeded. Finally, interviewers provided respondents with an educational flyer on the subject of hand washing, a travel-sized hand sanitizer and a brief orientation.

Data Analysis

Data entry was carried out by epidemiologists from the OPHPR. Once data cleaning was conducted, data quality was assessed by reviewing 10% of the questionnaires (n=18). Epi Info version 7.2 was used for data entry, cleaning and analysis.

Weighted analysis was performed based on the following equation:

$$Weight = \frac{Total\ number\ of\ housing\ units\ in\ sampling\ frame}{number\ of\ housing\ units\ interviewed\ within\ cluster\ *\ number\ of\ clusters\ selected}$$

Unweighted and weighted frequencies, and 95% CIs for the weighted frequencies were calculated. The results of the weighted frequencies represent the estimated number of households with those characteristics within the sampling frame.

Results

The selected sampling frame was comprised 92 clusters, 2,528 housing units and 5,936 residents. The first sampling stage resulted in the selection of 24 clusters: four clusters were selected twice, and one cluster was selected three times. The remaining clusters were selected once. The resulting clustered totaled 1,041 housing units and 2,478 residents.

The CASPER team completed 178 interviews, from a goal of 210 for a resulting completion rate of 83.3%, a cooperation rate of 85.6%, and contact rate of 51.1%. A total of 348 housing units were approached but contact was achieve in 208 of these households; two of them didn't meet the study's requirement, in one case because the person didn't speak Spanish and in the other, the person didn't live in the house, 27 people refused to participate and in one case the interview was not completed.

The majority of housing units were owned by the respondents (82.0%). The mean number of people living in the households was 2.3 ± 1.2 . Household had at least one minor (0-17 years old) in 29.6% of cases, 7.3% had at least one infant and in 48.9% of cases at least one person 65 years or older lived at the house, and at least one female lived in most the houses (89.5%). In 6.7% of the households lived someone that participates in the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) and in 4% lived at least one person with no health coverage.

Most households reported owning animals (65.2%); 86.1% had dogs and 21.1% cats. Other animal mentioned were birds, hens/roosters and horses among others. Animal rabies vaccine should be administered to dogs, cats, cattle, goats, sheep and horses. When asked about rabies vaccination, only dogs (76.7%) and cats (59.3%) had been vaccinated.

The most prevalent chronic conditions reported by households were cardiovascular disease (42%), diabetes (31%), asthma (29%), other respiratory chronic conditions (16%), and mental health conditions (10%). Under the category "other", health conditions mentioned were thyroid, arthritis, cancer and fibromyalgia, among others (Figure 1).

When looking at the conditions reported by age group, asthma and other chronic respiratory conditions are the most prevalent conditions in the individuals 17 years or younger, while cardiovascular disease and diabetes are the most prevalent in the individuals 65 years and older (Figure 2).

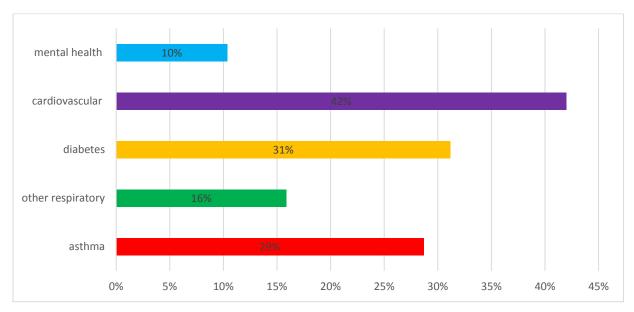

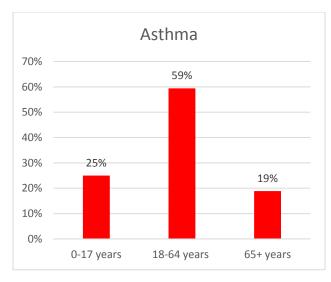

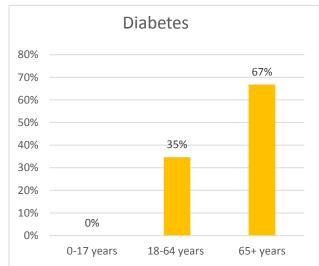

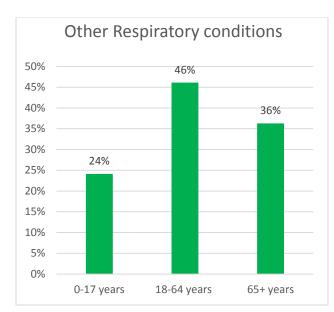

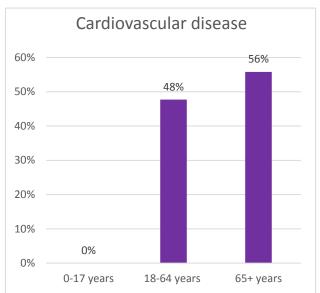

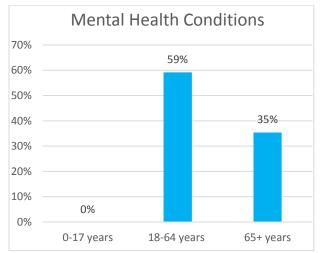

Figure 2. Prevalence of Chronic Conditions by age group, Humacao, April 2019

Access and functional needs populations require additional needs regarding medical care or communications, among others, before during and after an emergency. The community was assessed for households with members who are blind, deaf, bedridden, and certain medical treatments and equipment; these categories are not mutually exclusive. Respiratory therapy was the post prevalent medical need (11%), followed by insulin dependency (9%), and home health services (5%).

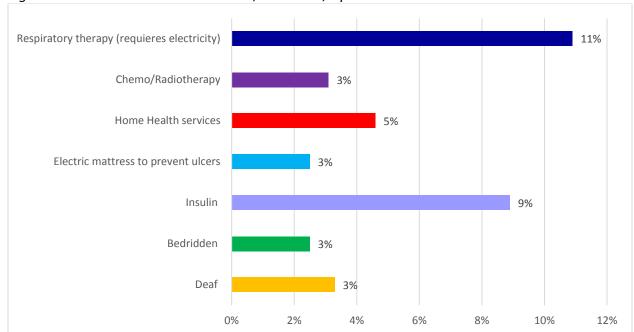

Figure 3. Access and Functional Needs, Humacao, April 2019*

When asked about the types of healthcare facilities close to the community, the facility most mentioned was clinical laboratory (45%), followed by Federally Qualified Health Center (FQHC/330) (31%) and the hospital (27%); 13.2% perceived they didn't have any healthcare facility close to their home (Table 7).

Most of the respondents informed their source of drinking water was The Puerto Rico Aqueducts and Sewers Authority (PRASA) (97%), 46% reported treating drinking water with chlorine, filtering or other treatment method, 45% used bottled up water as their drinking source, and 12% stored rain water. Almost ¾ of the households (72%) had a generator and the majority run with gasoline (96%)

Television is the most common source of information reported by households for emergency preparedness information (70%), followed by radio (56%), internet/social media (29%), family/friends/neighbors (17%), other source (7%) and newspapers (3%) (Figure 4).

^{*}None of the respondents reported blind residents or using oxygen nor dialysis therapy.

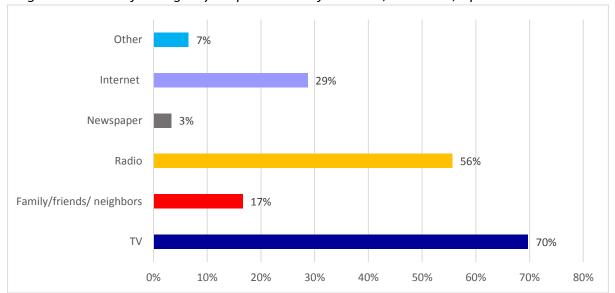

Figure 4. Source of Emergency Preparedness Information, Humacao, April 2019*

Participants were asked about their emergency plans, and 54% reported having an emergency family plan before hurricane Maria, and 82% informed knowing that FEMA recommends storing food and water for up to 10 days in preparation for emergencies.

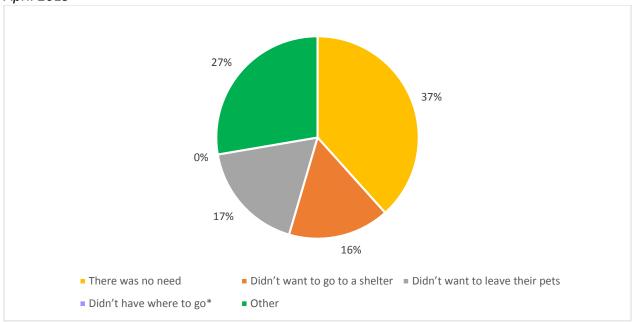

When asked about their experiences with hurricane Maria, 13.1% indicated they lived in another house when hurricane Maria hit land; of the 87% that did live at the same house, 69% indicated that there was an evacuation order for their house and 56% evacuated to their home to stay with family or friends (88.7%), or at another house (6.4%); only 3 people indicated they stayed at a public shelter; the majority (95%) evacuated before the hurricane but 5% evacuated it during the hurricane.

When inquired for the reason for not leaving their house, 37% thought there was no need, 17% didn't want to leave they pets, 16% didn't want to go to a shelter and 27% mentioned other reasons, such as their perception that the hurricane wasn't going to be as strong as it turned out to be (Figure 5).

A higher percentage of participants described the damage to their homes as moderate/habitable (44%), followed by severe (25%), destroyed (23%), and no damage (8%) (Figure 6). One fourth of the respondents (25%) perceived there is still debris in their community due to the hurricane.

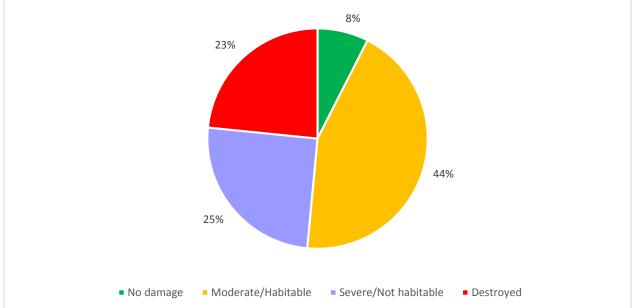

^{*}Under the category "other" 58% reported using their cell phone/phone as a source.

Figure 5. Reasons for not evacuating the house after a formal evacuation order, Humacao, April 2019

^{*}Only 3 people answered that they didn't have where to go. Estimates for n<5 are not valid.

Figure 6. Perceived damage to homes, Humacao, April 2019 8%

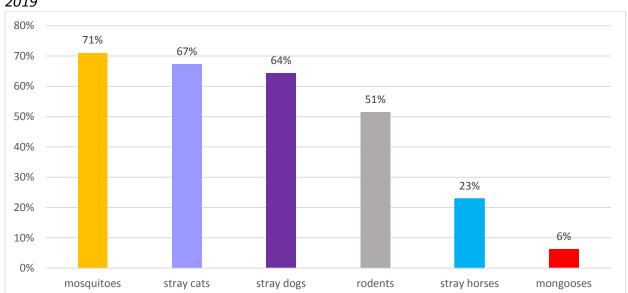

Figure 7. Percentage of increase in mosquitoes and animal after Hurricane Maria, Humacao, April 2019

More than half of participants' noticed and increase in mosquitoes (71%), strays cats (67%), stray dogs (64%) and rodents (51%); while 23% observed an increase in stray dogs and 6% reported an increased in mongooses.

Questions regarding anxiety and the need for emotional support reveal that 69% of respondents felt anxiety at the beginning of the past hurricane season (the hurricane season following Hurricane María), in 28% of the households a resident felt the need for emotional support and in 22% of the cases they sought emotional support.

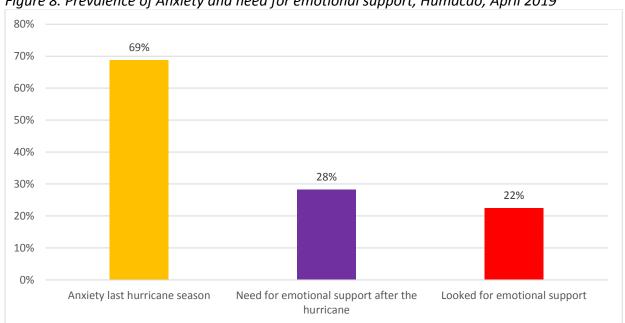

Figure 8. Prevalence of Anxiety and need for emotional support, Humacao, April 2019

Discussion and Conclusions

The data from this assessment is similar to island-wide data from Puerto Rico where cardiovascular disease, cancer, diabetes, asthma, arthritis and Alzheimer's disease are the main causes of disability. In the context of emergency preparedness and response, knowing this type of information regarding a community is important in informing response efforts in order to prevent exacerbation of the conditions, following a public health emergency.

Island wide the prevalence of hypertension in the 18 years and older population is 36.8% (95%CI: 35.4-3802%), while 13.5% (95%CI: 12.6-14.4%) have diabetes, 17.2% (95%CI: 16.1-18.3) have been diagnosed with asthma in their lifetime, and 10.1% (95%CI: 9.2-11.0%) still have asthma. These conditions are also the most prevalent ones seen in the community in Humacao which validates study's results (Figure 1). While, the most prevalent treatments were some typo of respiratory therapy that requires electricity and insulin therapy (Figure 3). Understanding the prevalence of chronic conditions can help plan better for the resources that will be requested after disasters or public health emergencies, such as pharmaceuticals, medical equipment and consumable medical supplies.

Information about the most frequent sources households use to stay informed about emergencies' preparedness (Figure 3) reveals that there is still a great amount of people whose main information media is television. Social media is frequently used to disseminate emergency preparedness information to the public, but 71% of respondents indicated not using it for this purpose. It is important to involve community and faith-based organizations in these efforts so that the message outreaches hard-to-reach population.

The majority of the houses had pets and 17% indicted that they didn't evacuate because they didn't want to leave them. These data shows that pets needs have to be taken into consideration when planning for emergencies response.

In these communities 56% of the people evacuated their homes but only 3 indicated they went to a public shelter. Also, 4.8% of the households evacuated during the hurricane. Communication and education strategies need to focus on promoting evacuation before the event, to prevent exposing residents and first responders to unnecessary risks.

These study evidences the importance of knowing community health and demographic characteristics to assist in emergency planning, and to improve allocation of resources. The OPHPR will use this information to guide emergency planning and for future communication and outreach activities.

Limitations

The main limitation for this assessment is that sampling and the weighted analysis used to estimate results was based on the 2010 U.S. Census data which does not account for changes in housing units after that. This is reflected by the low contact rate (51%) due to the amount if empty houses in the communities visited.

Also, information about health conditions and treatments are self-reported and the respondent did not necessarily know the conditions of everyone in the household. These issues however, are intrinsic to CASPER methodology because it's a household based survey.

"Árholes "rins" (inundación)

"Ayuda para sacar escombros, la luz y plagas por casas abandonadas."

"Buscar alguna manera que la agua corra, porque no hay desagüe y se inunda."

"Casi todo sigue siendo igual."

"Con analizar la zanja de agua que este al lado de la casa."

"Dicen que van que hacer las casas, por ejemplo, el muelle y no hacen nada. P.E.C.E.S eran los que iban a hacer y no se anunció por que aparecen muchos dueños. El puente de la reserva. La estufa asendereada de la antigua adrara."

"El aqua que llegó bastante."

"El alumbrado."

"El alumbrado de las calles."

"El alumbrado."

"En estos momentos lo más que me preocupa son los tsunamis y la forma de desalojo."

"En muchas casas se metió el agua. Aislado no hay camino."

"Energía eléctrica, falta de agua."

"Era el alumbrado, pero ya vivieron hace como dos semanas."

"Escombros."

"Falta de compasión con sus animales."

"Frente a la urbanización se inunda las Croacas y sale mucho olor."

"Inundaciones."

"La contaminación de mercurio."

"La dejadez, pasó eso y ahora estamos mejores económicamente. No se puede bajar la guardia."

"La oscuridad en esta comunidad. Somos buenos, pero no hay unión. Por la falta de unión no se progresa y en mi casa, el baño."

"La playa que vuelva salir y llegar a hogares."

"La playa y los lagos."

"La poca ayuda."

"La transportación, los envejecientes y las personas solas."

"La ubicación de donde viven, están rodeados de agua, que es una zona inundable."

"La zona que es inundable."

"Las aguas estancadas, ya que muchos han tapados las zanjas."

"Las alcantarillas, yo no sé si las limpian, se tapan."

"Las inundaciones."

"Las inundaciones y lluvias."

"Las inundaciones."

"Las luces de los postes, esto es como boca de lobo. El pastizal alto. La criminalidad, aunque este aguante."

"Le preocupa la situación de las alcantarillas, ya que la zona es inundable y así el área estaría más preparada." "Le preocupa que vuelva a ocurrir otro huracán." "Limpieza área diques." "Limpieza en las calles." "Llegar al correo. Yo soy mi mayor preocupación en esta comunidad. Si yo estoy bien ellos estarán bien. Si no tendré que llamarlos." "Lo que me preocupa es que se mude gente que esté en las drogas." "Los canales están tapados y no hay desagües." "Los escombros." "Los escombros de la comunidad." "Los tsunamis y terremotos. Oigo el oleaje del mar y pienso que viene por ahí." "Los vecinos tienen buena comunicación y son buena gente y se ayudan entre ellos." "Más respeto y ayuda mutuamente." "Me preocupa que nos quedamos, sabiendo que es un área de peligro. Aunque nos unimos como comunidad." "Me preocupa que nosotros no sabemos si hay un tsunami, no nos dicen para dónde ir, solo se escucha la alarma, no hay comunicación." "Me siento segura en esta casa." "Me sique preocupando que el mar se vuelva a alzar." "Miedo, porque dice maremoto y como estamos en la playa no sabemos dónde vamos a correr." "Muchos animales realengos." "Nada." "Nada." "Nada. La comunidad se está levantando rápido." "Ninguna" "Ninguna." "No." "No existe alumbrado en las calles." "No hay luces en las calles." "No hay luz." (postes y en su casa) "No hay postes de alumbrado." "No hay preocupación ninguna." "No hay salida segura. Salidas. Tsunami no accesible. En la dirección de la salida hay escombros, hay un camión lleno de basura y fango." "No me preocupa." "No me preocupa nada."

"No sé."

"No tengo preocupación, porque me he preparado para cuando venga arrancar."

"No tiene preocupación, solo ayudas llegaran temprano."

"No vuelva otro huracán."

"No, todo bien."

"Nosotros los residentes de Punta Santiago no tiene salida para desalojar si ocurre tsunami. Solo se resguardan arriba de la casa."

"Nueva temporada."

"Orientación sobre terremotos."

"Pasan los carros en exceso de velocidad."

"Plan de desalojo."

"Plan de desalojo. Orientación mejor y el de tsunami."

"Plan de desalojo, porque es muy lejos y no es muy rápido y no funciona."

"Preocupan las plagas mosquitos, insectos, ratones. La oscuridad, no hay foco, esto es boca de lobos. La criminalidad ha aumentado, se estaban metiendo a las casas."

"Que después que me haya mudado aquí vuelva a ocurrir algo." Nota: Vivía antes en la casa, se fue por el huracán y volvió.

"Que estemos preparados y un plan de contingencia."

"Que esto aquí se inunda."

"Que haya luz y agua, calles no alumbradas."

"Que les suceda nuevamente lo que sucedió al paso de Huracán María."

"Que mi esposo no esté aquí si pasa otro huracán."

"Que no hay luz en esta carretera. Si vienes por la noche no se ve nada al menos que un vecino deje una luz prendida o dejen la cancha prendida."

"Que no llegue otro huracán, por la desesperación uno no sabe qué hacer."

"Que no tenga mi casa "ready" para otra investida como esa. Ni tengo jaula para los gatitos. Tuve poner todos en el a casa."

"Que no tiene un buen hospital."

"Que no vuelva a ver otro huracán."

"Que nos ataque otro fenómeno igual o peor."

"Que nos deben reubicar a otro lado y sacar a otro lugar más seguro."

"Que nos preparemos para otro evento, y no lo dejemos para lo último."

"Que pase algo igual o peor, porque la gente dice que estamos preparados, pero no estamos preparados. Por más charlas que nos den."

"Que pase en un terremoto o tsunami."

"Que se meta el agua otra vez."

"Que se vuela a salir la playa y los ríos."

"Que sea un mejor lugar y que no vuelva a pasar lo que ocurrió, el drenaje está tapado."

"Que si viene otro huracán no voy a estar en esta casa."

"Que su casa queda al lado del monte, realizaron un drenaje detrás de su casa y no realizan mantenimiento."

"Que suceda lo mismo."

"Que suceda otro huracán y que no estén preparados."

"Que todavía están sacando escombro y por ahí puede haber una epidemia de mosquito."

"Que todavía hay trabajo que hacer. Limpiar las alcantarillas. Dentro de la comunidad no hay parque pasivo para los niños o centro comunal."

"Que uno salga y no pueda regresar y la luz."

"Que venga lo mismo de nuevo."

"Que venga otro."

"Que venga otro huracán."

"Que venga otro huracán igual de intenso y con respecto de la luz se tardaron mucho, aquí llegó la luz en marzo."

"Que venga otro huracán y un temblor."

"Que venga otro huracán."

"Que vuela a pasar lo mismo."

"Que vuelva a ocurrir otro huracán como María."

"Que vuelva a ocurrir y no puedan salir."

"Que vuelva a pasar otro huracán."

"Que vuelva a perder todo, esto estaba lleno de escombros. Que pongan los brazos de los postes."

"Que vuelva a suceder lo que paso, que entre el mar de nuevo."

"Que vuelva a suceder, que el aqua se meta adentro."

"Que vuelva otra vez y se salga la playa. Estamos indecisos si nos quedamos aquí."

"Que vuelva otro huracán tan grande como María."

"Quiere retirarse de su hogar, por las condiciones donde vive."

"Recibieron poca ayuda, todavía su marquesina esta sin techo."

"Recuperarme en mi hogar, porque tengo que empezar de nuevo, porque las cosas no están fáciles."

"Hemos hablado para las luces de los postes y no las ponen."

"Le preocupo una señora ciega que no ha recibido casi ayuda y el mono que se escapó".

"Quiere que su familia se mude porque entiende que su residencia no es segura".

"El peligro son los dos lagos que existen en el área."

"Le preocupa ocurra un huracán igual o peor y no estar preparados."

"Me preocupa la plaga de mosquitos que vienen de los lagos."

"No hay una buena planificación ante un desastre."

"No tengo preocupaciones, solo que todo vuelva a la normalidad."

"Se preocupa porque el mar vuelva a entrar a su comunidad."

"Rumores de robo. Tsunami."

"Se preocupa por sus condiciones de salud, ya que él está solo."

"Se preocupan por si ocurre otra catástrofe y ocurra otro huracán de este tipo."

"Siempre pienso en la salida. El puente se puede caer. En caso de tsunami, donde ir, porque la montaña no tiene esquina."

"Su hermana."

"Su mayor preocupación son los pillos que le roben en su hogar, porque le han robado 4 veces."

"No se ve nada al caer la noche y es peligroso."

"Su propiedad."

"Telefonía residencial por cable."

"Temor que venga otro huracán y que se inunden las casas."

"Tener un hogar seguro."

"Terminar de construir su techo."

"Terminar la casa y habitar su casa, ya que fue destruida por el huracán María."

"Terminar reconstruir su residencia."

"Tratar de arreglar mi casa. No hay transportación (trolly) y que cobran \$2.00."

"Tsunami e inundaciones."

"Vender la casa."

"Yo cuando digan que viene algo me voy, porque lo material es material que cada uno haga su plan."

Hoja Informativa

Titulo	del proyecto	: Evaluación y	seguimiento	de las nec	esidades de	salud pública	de tres
comu	nidades de zo	nas costera, d	le montaña y c	ercana a ur	na represa, tra	as el paso del l	nuracán
María	por Puerto Ri	ico.				200401240100000000000000000000000000000	
	500						

Hola, ¡Buenos días! Somos ()	y	(
	Nombre del entrevistador #1	್	Nombre del entrevistador #2

Somos del Departamento de Salud de Puerto Rico y estamos realizando unas preguntas, basadas en la aplicación de la herramienta "Evaluación Comunitaria por la Respuesta a Emergencias en Salud Pública" (CASPER, por sus siglas en inglés). Esta evaluación consiste en un cuestionario diseñado para recopilar datos por medio de entrevistas a miembros de la comunidad sobre las necesidades del hogar. El objetivo es determinar las necesidades de salud pública y servicios médicos, en la fase de recuperación, tras el paso del huracán María.

El propósito de esta evaluación es utilizar la información que recojamos para poder dar recomendaciones de salud pública en temas de preparación para emergencias. Para esto, estamos haciendo a las personas unas preguntas que toman aproximadamente 25 minutos.

El proyecto dura año y medio, y consta de 2 fases. En la primera fase vamos a visitar 3 comunidades, incluida ésta y durante este periodo vamos a entrevistar un total de 630 personas. En la segunda fase, volveremos seis meses después a las mismas comunidades, entrevistando otras 630 personas. Una vez finalizado el estudio, habremos entrevistado un total de 1,260 personas. En ambas fases, las personas que participen deben tener 21 años o más, hablar español y deben vivir en la residencia.

El cuestionario tiene preguntas sobre las personas que viven en la residencia, sus condiciones de salud y disponibilidad de servicios básicos y teléfono en la casa. También, incluye algunas preguntas sobre sus experiencias tras el paso del huracán María y preguntas sobre la preparación para emergencias de los miembros de la vivienda y la necesidad de ayuda emocional después del huracán.

La información que nos facilite será confidencial. No vamos a recoger ninguna información que le pueda identificar directamente y ninguno de los servicios que usted recibe se verá afectado de ninguna manera por contestar a estas preguntas. Estamos recogiendo sus experiencias, no su conocimiento. Contestar que "no sabe" es una respuesta completamente válida.

Además, su participación es completamente voluntaria. Si en algún momento no desea continuar podemos terminar la entrevista.

OFICINA DE PREPARACIÓN Y COORDINACIÓN DE RESPUESTA EN SALUD PÚBLICA Bo. Monacillos, Calle Casia #2 San Juan, PR 00921-3200 Tel.: (787) 773-0600 - Fax: (787) 773-0619

GOBIERNO DE PUERTO RICO

Departamento de Salud

Se considera que participar en esta evaluación conlleva un riesgo mínimo. Usted podría sentirse incómodo/a por algunas preguntas como las que hablan de necesitar ayuda emocional. Como beneficio de esta evaluación le vamos a estar dando información sobre la prevención de enfermedades a través del lavado de manos.

La información de esta evaluación de investigación podría conducir a mejorar la preparación de los individuos, las comunidades y las agencias de gobierno en una emergencia futura.

No se recogerá información que lo pueda identificar de manera individual. Los cuestionarios en papel se guardarán en un archivo cerrado en la oficina del investigador principal a la que solo éste tiene acceso. Serán archivados por 5 años, después de los cuales serán triturados. Adicionalmente los datos se archivarán de manera electrónica en los servidores de la Oficina de Preparación y Coordinación de Respuesta en Salud Pública del Departamento de Salud. Los mismos cuentan con la seguridad requerida por el Departamento de Salud en cumplimiento de HIPAA.

Si tiene alguna pregunta o duda la puede hacer en cualquier momento. Si tiene preguntas una vez nos hayamos ido, puede llamar al investigador Igor Uriz al 787-765-2929, ext. 4308.

Si usted tiene alguna pregunta sobre sus derechos como participante de esta investigación, puede contactar a la Oficina para la Protección de Participantes Humanos en Investigación (IRB) al (787) 758-2525 extensiones 2510-2515 o al correo electrónico opphi.rcm@upr.edu referente al protocolo de investigación A-58101117.

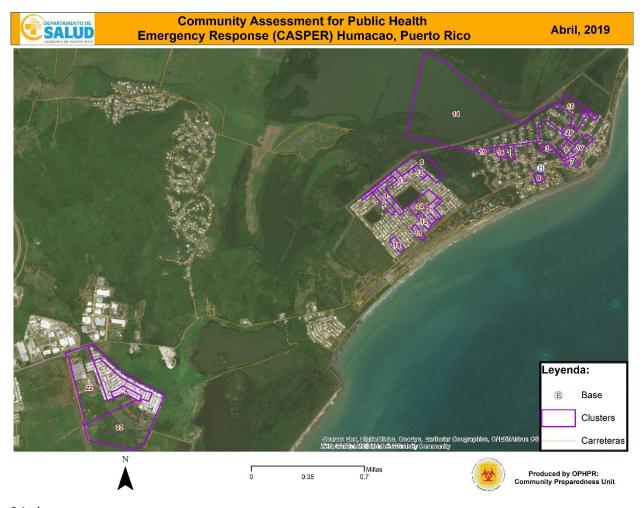

Gracias	por su participación!
John.

1,041 housing units

2,478 total population

Appendix D: Public Health Educational Material

Appendix E: Community Outreach Activity

On May 15, 2019 the Puerto Rico Health Department collaborated in the activity "Prepare your Emergency Backpack" with an educational booth at Punta Santiago in Humacao. The educational booth theme was Arbovirus Diseases. The team explained to the community the protective measures they should take on their home to prevent mosquito bites and the active ingredients that their repellent should have. After the people were educated they were giving educational booklets and mosquito repellent. In this activity we reach a total of 75 people.

The activity "Prepare your emergency backpack" was organized by with community organization Programa de Educación Comunal de Entrega y Servicios (P.E.C.E.S., Inc.) and had the collaboration of the Puerto Rico Department of Health.
